Программное Обеспечение

R-SeeNet - Программное приложение для осуществления мониторинга статуса и работы маршрутизаторов Conel

Предоставляемая информация об отдельных маршрутизаторах:

Объем перенесенной информации за сегодня, вчера, за актуальную неделю, за актуальный месяц, за прошлый месяц;

Актуальная информация о силе сигнала, базовой станции к которой подключен роутер, операторе мобильной связи;

Мощность сигнала за сегодня, вчера, за актуальную неделю, за актуальный месяц, за прошлый месяц;

Среднее время отклика маршрутизатора за сегодня, вчера, за актуальную неделю, за актуальный месяц, за прошлый месяц;

Доступность роутера (маршрутизатора) за сегодня, вчера, за актуальную неделю, за актуальный месяц, за прошлый месяц;

Количество соединений PPP за сегодня, вчера, за актуальную неделю, за актуальный месяц, за прошлый месяц;

Количество подключенных различных каналов за сегодня, вчера, за актуальную неделю, за актуальный месяц, за прошлый месяц.

SmartCluster - это программное обеспечение, которое предназначено для реализации защищенной коммуникационной системы с использованием публичной сети Internet. SmartCluster является OpenVPN сервером, который реализует три функции для создания защищенных частных сетей.

1 - Как OpenVPN сервер реализует соединение клиентов (маршрутизаторов Conel и конечных компьютеров), используя OpenVPN туннели. Создает связь между отдельными туннелями и тем самым позволяет вступать между собой в коммуникацию устройствам, которые находятся в различных туннелях и разных локальных сетях (LAN).

2 - На основе определяемой пользователем конфигурации сети и туннелей VPN, SmartCluster создает конфигурационный файл для роутеров (маршрутизаторов) Conel. При создании конфигурационного файла SmartCluster также создает сертификаты безопасности для обеих сторон OpenVPN туннеля. Таким образом значительно облегчается задача пользователя по конфигурации и установке роутеров (маршрутизаторов) Conel, в виртуальных частных сетях.

3 - SmartCluster также информирует о состоянии подключения отдельных маршрутизаторов, предоставляя таким образом простой функционал для управления сетью.

SmartCluster решает задачу коммуникации между различными устройствами в локальных сетях (LAN), где роутеры (маршрутизаторы), предоставляющие связь по каким-либо причинам (техническим или экономическим) не могут обладать публичным Internet IP-адресом.

Используя сервер SmartCluster пользователю нет необходимости решать проблемы связанные с приобретением публичных Internet IP – адресов, или частных APN (Access Point Name) от GSM/UMTS оператора.

SmartCluster решает также задачу сетевой безопасности и защищенного соединения между локальными сетями.

SmartCluster осуществляет простое подключение роутеров (маршрутизаторов) Conel с SIM картами от разных GSM/UMTS операторов. Таким образом, даже устройства, которые используются в разных странах, вступая в коммуникацию, при помощи сервера SmartCluster, используют локальные тарифные планы, без необходимости использования роуминга.
